

No. 126, Original

In The Supreme Court of the United States

---

DEPOSITION OF NORMAN L. KLOCKE, Ph.D., P.E.

---

STATE OF KANSAS,

Plaintiff,

vs.

STATE OF NEBRASKA and STATE OF COLORADO,

Defendants.

---

Wednesday, June 27, 2012

8:09 a.m.

PURSUANT TO NOTICE and the Federal Rules of Civil Procedure, the above-entitled deposition was taken on behalf of Defendants at 1525 Sherman Street, Denver, Colorado, before Denise A. Freeman, Registered Professional Reporter and Notary Public within Colorado.

1 APPEARANCES:

2 For the Plaintiff:

JOHN B. DRAPER, ESQ.

Montgomery & Andrews, P.A.

325 Paseo de Peralta

Santa Fe, New Mexico 87501

Post Office Box 2307

Santa Fe, New Mexico 87504-2307

BURKE W. GRIGGS, ESQ.

Kansas Department of Agriculture

109 SW 9th Street, 4th Floor

Topeka, Kansas 66612

8 For the Defendant State of Nebraska:

DONALD G. BLANKENAU, ESQ.

Special Assistant Attorneys General

Blankenau Wilmoth, LLP

206 South 13th Street, Suite 1425

Lincoln, Nebraska 68508-2002

JUSTIN D. LAVENE, ESQ.

BLAKE E. JOHNSON, ESQ.

Agriculture, Environment & Natural Resources

Office of the Attorney General

State of Nebraska

2115 State Capitol

Lincoln, Nebraska 68509-8920

16 For the Defendant State of Colorado:

SCOTT STEINBRECHER, ESQ.

Assistant Attorney General

Natural Resources and Environment Section

Office of the Attorney General

State of Colorado

1525 Sherman Street, 7th Floor

Denver, Colorado 80203

20 Also Present:

Jasper Fanning

Brian Dunnigan

Donna Ormerod

Dale Book

1 PROCEEDINGS

2 NORMAN L. KLOCKE, Ph.D., P.E.,

3 having been first duly sworn, was examined and

4 testified as follows:

5 EXAMINATION

6 BY MR. BLANKENAU:

7 Q. Good morning, Dr. Klocke.

8 A. Good morning.

9 Q. Let's begin by having you state your full

10 name and spell your last name, please.

11 A. Norman Lee Klocke, K-L-O-C-K-E.

12 Q. Thank you. Dr. Klocke, I am going to hand

13 you what we are going to mark as Exhibit No. 1.

14 (Deposition Exhibit 1 was marked.)

15 Q. (BY MR. BLANKENAU) Dr. Klocke, do you

16 recognize that document?

17 A. Yes, I do.

18 Q. What is it, please?

19 A. It's the notice for me to appear for this

20 deposition.

21 Q. Does it include a subpoena duces tecum? It

22 should state it on the very front.

23 A. Yes.

24 Q. That requires you to bring any additional  
25 documents or data. Did you bring any such materials

PATTERSON REPORTING & VIDEO

5

1 with you today?

2 A. No.

3 Q. Thank you. Dr. Klocke, when were you first  
4 hired by Kansas to serve as an expert witness in this  
5 matter?

6 A. Let's see. It would have been, I believe,  
7 December of -- probably actually hired January of 2011.

8 Q. January 2011?

9 A. '11.

10 Q. When did you receive a copy of Dr. Sunding's  
11 expert report in this matter?

12 A. I don't remember the date. It was through  
13 electronic transfer, but I certainly don't remember the  
14 date. It was before -- of course, before his  
15 deposition. I don't remember how long before his  
16 deposition.

17 Q. Do you remember who you received that report  
18 from?

19 A. No, I don't. It was through an e-mail, but  
20 I don't know specifically -- remember who the sender

21 was.

22 Q. Did you receive any instructions with that  
23 transmittal?

24 A. No, I did not.

25 Q. You didn't participate in the arbitration

PATTERSON REPORTING & VIDEO

6

1 leading to this action, did you?

2 A. I did not participate.

3 Q. Did Kansas ever provide you -- anyone from  
4 Kansas provide you with a copy of Dr. Sunding's expert  
5 report in that arbitration proceeding?

6 A. No.

7 Q. Did they ever provide you with a copy of his  
8 transcript testimony in that arbitration?

9 A. No.

10 Q. Were you aware that Dr. Sunding provided  
11 testimony in that proceeding?

12 A. Not until, I believe, at the time of his  
13 deposition, somewhere in there.

14 Q. So no one from Kansas informed you prior to  
15 his deposition that he had participated previously?

16 A. That's correct.

17 Q. Following his deposition, did you ask for  
18 any of his prior materials from the arbitration?

19 A. No, I did not.

20 Q. And by "prior materials," I mean his  
21 transcript or his expert report.

22 A. From previous --

23 Q. From the arbitration, yes.

24 A. No.

25 Q. Were you present at Dr. Sunding's

PATTERSON REPORTING & VIDEO

7

1 deposition? I can't recall.

2 A. Yes, I was.

3 Q. And did you provide any input to the  
4 questions that counsel for Kansas asked Dr. Sunding  
5 during his deposition?

6 A. There are a few questions, yes.

7 Q. And did you hear his entire deposition?

8 A. Yes, I did.

9 Q. Did you receive a copy of his deposition  
10 transcript?

11 A. Yes.

12 Q. And when did you receive that?

13 A. I don't specifically remember the dates. Of  
14 course, it was after the deposition, but I don't  
15 remember if it was weeks or a month or -- in that  
16 general area, but I don't remember specifically.

17 Q. Do you recall from whom you might have

18 received it?

19 A. No.

20 Q. Do you recall any instructions accompanying  
21 that transcript?

22 A. There were none.

23 Q. When did you begin working on your rebuttal  
24 report?

25 A. Well, it was --

PATTERSON REPORTING & VIDEO

8

1 MR. DRAPER: Do you mean put pen to paper on  
2 his report?

3 MR. BLANKENAU: Just beginning work on the  
4 report itself.

5 MR. DRAPER: In other words, write out some  
6 first draft, that kind of thing?

7 MR. BLANKENAU: Correct.

8 A. Of course, I was taking notes during the  
9 deposition and I was -- had notes generated from the  
10 report of Dr. Sunding. As far as when I started -- boy,  
11 that's -- it was probably not too long after I received  
12 the deposition transcript, but the timing I don't  
13 recall.

14 Q. (BY MR. BLANKENAU) And you began taking  
15 notes at his deposition in anticipation of a rebuttal

16 report?

17 A. No. Just the notes -- I took notes as went  
18 along for my own use.

19 Q. What use would that be?

20 A. Just so I can recall what went on during the  
21 deposition. I did not know anything about a rebuttal  
22 report at that time.

23 Q. Let me switch to your report then, if we  
24 might. We'll have this marked as Exhibit No. 2.

25 (Break was taken from 8:15 to 8:18.)

PATTERSON REPORTING & VIDEO

9

1 (Deposition Exhibit 2 was marked.)

2 Q. (BY MR. BLANKENAU) Dr. Klocke, I just have  
3 given you what has been marked as Exhibit No. 2. Again,  
4 do you recognize that document?

5 A. Yes, I do.

6 Q. What is that, please?

7 A. It's a copy of the rebuttal report that I  
8 prepared.

9 Q. And we will note for the record that it is a  
10 two-sided copy. Did anyone assist you in preparing that  
11 rebuttal report?

12 A. The only assistance I got was in the  
13 formatting area, just how to format the report.

14 Q. From whom did you get that assistance?

15 A. John Draper.

16 Q. Why don't you turn to the first page.

17 That's KS1150. Right before No. 1, Dr. Sunding's

18 Qualifications, you have a sentence, "I am responding to

19 Dr. Sunding's report and deposition as an expert." Do

20 you see that?

21 A. Yes, I do.

22 Q. Could you take this blue felt pen and just

23 mark a line on the margin what portions of this report

24 responds to Dr. Sunding's deposition that was not a part

25 of his expert report.

PATTERSON REPORTING & VIDEO

10

1 A. Was not a part of -- I am marking what is

2 not part of his expert report?

3 Q. Correct, but was part of his deposition.

4 MR. DRAPER: That would include any explicit

5 references to the deposition?

6 MR. BLANKENAU: Certainly.

7 Q. (BY MR. BLANKENAU) And you can underline it

8 or however, just as long as we don't really interfere

9 with the text.

10 A. I will do this to the best of my

11 recollection.

12 Q. Sure. I can't ask you to do it better than

13 that.

14 A. And I am not marking what my responses were  
15 to the issues at hand?

16 Q. You are just identifying the issue itself.  
17 That's fine.

18 A. Okay. This is what I recollect.

19 Q. And I will note for the record that  
20 Dr. Klocke has made his designation with blue felt pen  
21 by drawing a vertical line in the left-hand margin of  
22 the pages; is that correct?

23 A. Yes.

24 Q. I am going to hand this report back to you.  
25 Thank you. I'd ask you to turn to, again, KS1150 and

#### PATTERSON REPORTING & VIDEO

11

1 Dr. Sunding's Qualifications, that second paragraph.  
2 You identify particular scientific areas of study which  
3 you believe are important to understanding crop  
4 production functions or developing them. Do you see  
5 that?

6 A. Yes, I do. Can I interject?

7 Q. Sure.

8 A. The discussion here is not the crop  
9 production function. It's the CROPSIM model.

10 Q. I'm sorry. Thank you for that  
11 clarification.

12 Can you tell me how the study of soil  
13 science, which you have listed there, impacts your  
14 understanding of the suitability of CROPSIM for  
15 developing crop production functions?  
16 A. Soil science is important because the  
17 CROPSIM model is what we call a soil water balance  
18 model. So that we are trying to look at the inputs or  
19 the water going into the soil volume, which is the  
20 active root zone in the crop, and the water as an output  
21 of that soil volume.  
22 So there are several processes that go on  
23 there that relate to the soil itself. The infiltration  
24 component, water going into the soil, and the runoff  
25 component, water that does not infiltrate the soil, goes

#### PATTERSON REPORTING & VIDEO

12

1 off -- moves from where it impacted the soil surface.  
2 And then the drainage or the water that percolates below  
3 the root zone of the crop.  
4 So the processes around the soil into,  
5 through, and out of it is the core of what is needed for  
6 that soil water balance.  
7 Q. How about the study of agronomy? How does  
8 that factor into the same?  
9 A. That more relates to the crop itself as far

10 as the characteristics of how it grows and develops over  
11 the course of the season. That's the main relationship.  
12 It's more how the crop functions.

13 Q. How about agricultural meteorology?

14 A. That more relates to the relationship of the  
15 atmospheric conditions, the energy in the atmosphere, to  
16 draw water out of the crop. So, actually, the  
17 transpiration process. So that the influence of  
18 different parameters in the atmosphere around the crop  
19 influence about the water that comes out of the crop.

20 Q. Is that a specialized field of study,  
21 agricultural meteorology?

22 A. It is a branch -- it is a specialized field.  
23 Of course, in my training, specifically we examined and  
24 worked with the influence of atmosphere on the water  
25 transpiring out of the crop, and that's the piece of ag

#### PATTERSON REPORTING & VIDEO

13

1 meteorology that I have dealt with. It's a much larger  
2 field than that.

3 Q. But the piece that you are dealing with  
4 really doesn't have any connection to weather or weather  
5 patterns, does it?

6 A. No. It's the conditions of that day that  
7 influences. It's not climate, which I would interpret  
8 as weather-pattern-related. This is the actual

9 radiation, humidity, temperatures, and also the wind  
10 movement that affects that crop.

11 Q. So help me understand then the distinction  
12 between agricultural meteorology versus just plain  
13 meteorology.

14 A. Well, the only thing I can try to explain is  
15 my piece of what that field might entail. I don't know  
16 if I can generalize it too much beyond that.

17 Q. What about irrigation engineering?

18 A. That's my specific training. And a lot of  
19 what we as irrigation engineers do is try to evaluate or  
20 put the whole system together of what -- say, the system  
21 of getting the water from the ground through the  
22 irrigation system to the crop, to the soil, and then  
23 what happens to that water.

24 So some of these other fields are looking at  
25 the different pieces of the system, as we have already

#### PATTERSON REPORTING & VIDEO

14

1 talked about. Where a lot of our work in engineering --  
2 the fields of engineering, we're trying to put the whole  
3 system together.

4 Q. What about crop physiology?

5 A. That relates to more specifically on the  
6 processes going on in the plant to transmit things like

7 nutrients into the plant and how the plant uses those  
8 nutrients, how the crop is growing.

9 But we have to understand the relationships  
10 of the soil water, the status of the soil water, how  
11 much water is in the soil and how the crop draws that  
12 water out and then gets this to the atmosphere.

13 I am not talking about the details of the  
14 process in the plant. More understanding how that  
15 conduit of the water goes -- the conduit of the plants  
16 that transmit water through it.

17 Q. How is that different than agronomy then?

18 A. I would say it's more specialized than  
19 dealing with the details of those processes within the  
20 plant.

21 Agronomy, I think, is a broader field that  
22 gets more into the management -- does get more into the  
23 management of the crops. And just more the aggregate of  
24 what's going on with the crop than the specific  
25 processes within the crop.

#### PATTERSON REPORTING & VIDEO

15

1 Q. Would it be fair to describe crop physiology  
2 as, effectively, a subset of agronomy?

3 A. Yes. I would say so, yes. Because  
4 that's -- the crop physiology courses I have taken are  
5 within an agronomy curriculum.

6 Q. You also list crop interactions with the  
7 atmosphere and soils. That sounds a lot like agronomy  
8 again or --

9 A. Well, there's a lot of crossover between the  
10 irrigation engineering community and the agronomy  
11 community. So, again, we are putting systems together,  
12 but we are always interfacing with agronomists to get  
13 the irrigation management in sync with the broader crop  
14 management.

15 Q. I reviewed your CV, after I read the list of  
16 studies, and I didn't see reflected in your CV any  
17 indication you had received training in any of those  
18 areas other than the engineering portion?

19 A. That would be in my academic -- recorded in  
20 my classes in college. As far as specific detail or a  
21 specific tie -- but I work with and interact with all of  
22 those disciplines.

23 Q. So why don't you include that in your CV?

24 A. My course --

25 Q. All of the information that you have listed

#### PATTERSON REPORTING & VIDEO

16

1 here, all of the fields of study?

2 A. I guess I didn't -- I really didn't think  
3 about putting all my transcripts in.

4 Q. So then how did you know that Dr. Sunding  
5 didn't receive any similar training?

6 A. Well, again, as I reviewed his CV, he  
7 responded the same way I did with manuscripts and all  
8 that.

9 Q. So wouldn't it be fair to say you are not  
10 qualified either for the same reason, that it's not  
11 reflected in your CV?

12 A. Well, I guess I disagree with that  
13 statement.

14 Q. Why is that?

15 A. It was also, I think, an interpretation --  
16 or what I saw in the expert report and in the  
17 deposition, that was my interpretation of what he was  
18 coming across with, anyway.

19 Q. But that differs directly with your  
20 statement that he didn't have the training or expertise  
21 in those areas?

22 A. I guess I still go by -- my impression was  
23 that the expertise was not there.

24 Q. So it was just based on your gut feel?

25 A. My interpretation of what was presented in

PATTERSON REPORTING & VIDEO

1 the report, whether it was presented in the -- or  
2 presented in the deposition.

3 Q. So in your view, unless they list all of  
4 these qualifications, all of their studies, your  
5 interpretation would be that they aren't qualified; is  
6 that correct?

7 A. Yes, I think that's correct. What I would  
8 be looking for would be more evidence.

9 Q. Let's move to Part 2 then, Kansas Use of  
10 Crop Production Functions to Calculate Yield  
11 Differences. That's also on KS1150. Do you see that?

12 A. Yes, I do.

13 Q. In that section you refer to the  
14 Cobb-Douglas mathematical function. Can you describe  
15 how you used the Cobb-Douglas mathematical function in  
16 your report, your rebuttal report?

17 A. In the rebuttal report or my expert report?

18 Q. Excuse me. Your expert report.

19 A. This was basically the crop production  
20 function that I used for the yield response of the crop  
21 to the input of irrigation. So that trying -- the way  
22 we really went at calculating the differences in yield,  
23 when you went from one amount of irrigation to another  
24 amount of irrigation, along that crop production  
25 function.

PATTERSON REPORTING & VIDEO

1           So the calculation of the yields -- of the  
2 yield differences that came about from that change in  
3 the irrigation amount, it came from the crop production  
4 function.

5           Q. What caused the development of the  
6 Cobb-Douglas?

7           A. Dr. Martin at the University of Nebraska,  
8 Lincoln, was the one that spearheaded that part of the  
9 project that I worked on.

10           And he really started that work in the 1980s  
11 to help us formulate crop production functions based on  
12 the inputs to that mathematical equation so that we  
13 could move beyond the crop production functions or the  
14 measurements we can take in the field research where you  
15 were taking measurements of irrigation input, different  
16 amounts, and recording the yields as a result.

17           And then trying to go beyond that research  
18 field setting and be more able to generalize it to other  
19 settings or other locations.

20           So we can't conduct field research at every  
21 location we want to try to develop a crop production  
22 function, but we do need to have that tool in our  
23 toolbox.

24           Q. You state in here that the Cobb-Douglas  
25 production function was developed in the economics

1 field; is that correct? You state that in the  
2 third-from-the-bottom line.

3 A. That statement comes from just -- not a  
4 detailed look at it, but from looking at a little bit of  
5 the history, the history back into the 1800s and into  
6 the 1900s of when Cobb and Douglas were active in coming  
7 up with that diminishing return phenomenon and would  
8 have an input to a system. You have a response -- in  
9 this case, input irrigation and yield response.

10 And then seeing that, as you add more input,  
11 the response becomes less. And Dr. Martin, his  
12 contribution was to adapt that to the irrigation field  
13 or irrigation applications.

14 So that's -- I didn't go in detail in  
15 looking at that background, but I went to try to find  
16 out, Well, where did Cobb and Douglas start?

17 Q. But you stated it's in the field of  
18 economics?

19 A. That's my understanding, that they were --  
20 that Cobb and Douglas were working in that discipline.

21 Q. Have you had any training in economics?

22 A. Well, I think the training in economics that  
23 I have had is in conjunction with a lot of the  
24 engineering curriculum that we go through as engineers.  
25 So that you get into feasibility studies or how the

PATTERSON REPORTING & VIDEO

20

1 systems might impact from an economic viewpoint. We  
2 have that component of our training.

3 As far as a specific course, I am trying to  
4 recall. I can't bring that back.

5 Q. Let move to Section 3 then, Applications of  
6 CROPSIM. In that first full paragraph of that section,  
7 you state that you've tested Dr. Martin's C-D crop  
8 production function results with your field research  
9 data where you measured actual yields from six different  
10 amounts of irrigation over five years. Do you see that?

11 MR. DRAPER: Which paragraph?

12 MR. BLANKENAU: The first full paragraph of  
13 Section 3 on KS1151.

14 MR. DRAPER: And the particular sentence you  
15 are interested in?

16 A. I see it about midway down.

17 Q. (BY MR. BLANKENAU) Yeah. Let me just quote  
18 it so Counsel can know what I am looking at. It's,  
19 quote, I tested Dr. Martin's C-D crop production  
20 function results with my field research data where I  
21 measured actual yields from six different amounts of  
22 irrigation over five years, end quote. Do you see that?

23 A. Yes, I do.

24 Q. Where did you conduct that research?

25 A. Garden City, Kansas.

PATTERSON REPORTING & VIDEO

21

1 Q. Where is that relative to the KBID area?

2 A. This would be in southwest Kansas. Relative  
3 in miles, I would say possibly it's -- KBID is northeast  
4 of Garden City probably about 200 miles.

5 Q. So how many miles east, approximately?

6 A. I would say, 120 to 140, something in that  
7 range.

8 Q. And when did you conduct this research?

9 A. The results I quoted were from 2005 to 2009.  
10 We have carried on that experiment beyond 2009.

11 Q. In the Garden City area?

12 A. At the Garden City Research Center.

13 Q. Toward the bottom of that same section, the  
14 last paragraph, you state, "Contrary to Dr. Sunding's  
15 assertions, the C-D crop production function based on  
16 CROPSIM parameters is a method accepted by experts in  
17 Nebraska and Kansas for use in decision management tools  
18 and by the RMA for yield expectations for changes in  
19 water supplies for irrigation." Do you see that?

20 A. Yes.

21 Q. Can you name those experts that you are  
22 referring to?

23 A. Okay. I might also interject here. What I

24 was thinking about here was whether this originated from  
25 the deposition or the report. That I can't recall.

PATTERSON REPORTING & VIDEO

22

1 Q. Take a few minutes to think about it, if you  
2 need to.

3 A. I believe that the reference to decision  
4 management tools, I believe that Dr. Sunding discussed  
5 that in his deposition, I believe.

6 And go back to your question now.

7 Q. Sure. You indicate that it was an accepted  
8 method by experts in Nebraska and Kansas?

9 A. Okay.

10 Q. Can you name those experts for me, please?

11 A. That would be Dr. Derrel Martin. As far as  
12 the application of the CROPSIM parameters to the C-D  
13 function, that would come from Dr. Martin.

14 Q. Were there any in Kansas then?

15 A. Well, myself. And my role was, again, to  
16 test the results. So when the results coincided, I  
17 thought it was an appropriate application of the C-D  
18 function.

19 Q. And did that same expert, Dr. Martin, use  
20 the C-D crop production function to calculate damages in  
21 any litigation that you are aware of?

22 A. Not that I am aware of.

23 Q. Can you identify any peer-reviewed  
24 publications that support the use of C-D crop production  
25 functions as you used them in this litigation?

PATTERSON REPORTING & VIDEO

23

1 A. There's the 2010 report by Dr. Martin, the  
2 paper I used as one of my references, which is on  
3 page 9.

4 Q. That's KS1158?

5 A. Yes, it is.

6 Q. I think we can move to Section 4 then. Kind  
7 of in the middle of that first paragraph -- and I am  
8 back on KS1151 -- it starts with, "I would expect." You  
9 indicate that the 30-year average maximum yield from  
10 CROPSIM is different than the maximum yields from  
11 current years. Do you see that?

12 A. Yes.

13 Q. By "different" do you mean lower?

14 A. Well, it relates to Figure 1 where there has  
15 been a generally upward trend in yields over the years.  
16 In irrigated yields particularly, not so much in the  
17 nonirrigated yields.

18 So because the CROPSIM was executed over a  
19 longer time period, I would expect that it would be  
20 somewhere along that regression line. So that yes, the

21 potential yields that we are seeing in our crops,  
22 especially corn, it is increasing over the years.

23 Q. What causes that increase, do you think?

24 A. There's, of course, several factors. One  
25 would be the genetics of the crop being improved,

#### PATTERSON REPORTING & VIDEO

24

1 particularly where management practices are getting more  
2 honed and the irrigation practices that we are using are  
3 more efficient in delivering water to the crop and the  
4 crop's use of the water.

5 So there are agronomic factors that -- a  
6 better capability of the crop to produce yields and also  
7 the management factors, including irrigation.

8 Q. If CROPSIM maximum yields are lower than  
9 actual current year maximum yields, how does that impact  
10 the range of error of your model?

11 A. As far as -- what we did was calculating  
12 yield differences, and that's what we are doing here in  
13 this case. The maximum yield actually drops out of the  
14 equation. So that we are -- the things that influence  
15 the production function for the Cobb-Douglas is what  
16 Dr. Martin calls water use efficiency.

17 And then also the slope of the yield  
18 response to evapotranspiration. Evapotranspiration,

19 meaning the consumptive use of water by the crop and  
20 evaporation from the soil surface.

21 MR. BLANKENAU: I am getting thirsty. Would  
22 it be appropriate for a 10-minute break?

23 MR. DRAPER: Okay.

24 (Break was taken from 8:49 to 9:14.)

25 Q. (BY MR. BLANKENAU) Dr. Klocke, let's move to

PATTERSON REPORTING & VIDEO

25

1 Section 5 of your report, which begins at KS1152. Do  
2 you have that?

3 A. Yes.

4 Q. There's a sentence that I found curious.

5 It's the last sentence on that page. It states, "There  
6 was no statistical correlation between annual  
7 precipitation and irrigated or nonirrigated crop  
8 yields." Do you see that?

9 A. Yes.

10 Q. Is that statement a general proposition or  
11 did you actually make a study on that point?

12 A. Let's go to Figure 2. And I was relating  
13 that to the R-square values.

14 Q. So that would be your study of that  
15 principle that you are espousing there; is that correct?

16 A. Yes. It was based on the regressions I did  
17 on the data.

18 Q. Why didn't you include that information in  
19 your initial report?

20 A. In my initial report?

21 Q. Yes.

22 A. Again, Dr. Martin and myself, through the  
23 work we did with the Risk Management Agency, were  
24 looking at average conditions for applying the  
25 Cobb-Douglas function. So the precipitation on the

#### PATTERSON REPORTING & VIDEO

26

1 particular -- the precipitation, per se, was -- and its  
2 variability was a part of, embedded in, the CROPSIM  
3 model. It developed the parameters.

4 So as we applied it, we are applying it in  
5 the average conditions of the 30-year -- 30-year  
6 coverage of the CROPSIM model. So it really wasn't  
7 pertinent -- the numbers of the precipitation weren't  
8 pertinent to how we applied the C-D crop production  
9 function.

10 The location was pertinent because the  
11 inputs to the crops -- or the inputs to the CROPSIM  
12 model were localized by county, as I pointed out.

13 Q. I guess I still don't understand why you  
14 wouldn't have included that in your original report.

15 A. Well, I just didn't.

16 Q. Let me draw your attention then to Figure 2.

17 Were those regression coefficients statistically

18 significant?

19 A. How I interpret the regression coefficients

20 would be R-square. That's not the coefficients of the

21 equation, but the R-square, and I considered that there

22 was no correlation. That was my interpretation of the

23 R-square number because it's very, very small.

24 Q. So if I understand your position, it's the

25 location and timing of rainfall that is important to

#### PATTERSON REPORTING & VIDEO

27

1 consider relative to crop yields; is that correct?

2 A. That's part of it. Because your effective

3 precipitation is actually -- the water that the crop can

4 use from precipitation is a component also in the

5 CROPSIM model.

6 So it's not only the timing of the -- one of

7 the components of that yield relationship to

8 precipitation is the timing of the precipitation and the

9 irrigation events and how effective that water is

10 utilized as part of that component. And also the

11 intensity of the rainfall event itself, the condition of

12 the surface of the soil as far as infiltration, its

13 capability to take water in.

14 There's several factors influencing the

15 nonresponse of yield-related annual precipitation as  
16 represented here.

17 Q. You mentioned "effective precipitation."

18 What would be noneffective precipitation?

19 A. Again, it would be -- the water that is not  
20 captured by the soil, it runs off, does not stay where  
21 the initial impact of that rainfall in getting into the  
22 soil. So that's the primary factor. And, of course, a  
23 lot of factors influence how much runoff there is.

24 The wetness of the soil; what happened  
25 before the precipitation event; how the precipitation

#### PATTERSON REPORTING & VIDEO

28

1 event came -- in other words, intensity; whether it was  
2 a short duration storm or a longer duration storm; the  
3 coverage of the soil with crop residue, for example; the  
4 slope of the soil surface, the land surface.

5 So there are quite variable conditions as  
6 far as water from precipitation impacting the crop. You  
7 can also think about the precipitation that occurs --  
8 does not occur during the growing season and its  
9 relationship from the time of the precipitation to the  
10 time of the extraction of the water from the soil.

11 And the effectiveness of that precipitation  
12 with a nongrowing season is also embedded here because

13 of the -- we are treating the annual precipitation.

14 Q. Is runoff the only noneffective precip  
15 component?

16 A. Another component, as I was talking about,  
17 is the timing of the irrigation -- or the precipitation  
18 in relationship to when the water is used by the crop.  
19 So if you have a precipitation event in the fall  
20 preceding the growing season -- the preceding fall, then  
21 that is not as effective because it's -- it's way ahead  
22 of the use of the water.

23 Also precipitation that percolates through  
24 the soil and is not picked up by the crop isn't  
25 effective. So it's what doesn't go into the soil,

#### PATTERSON REPORTING & VIDEO

29

1 runoff, and what isn't used by the crop. It drains  
2 through. And these phenomenon work year-round as far as  
3 water in the soil and then having it actually used by  
4 the crop.

5 Q. Can deep percolation leach fertilizer and  
6 other nutrients beyond the root zone?

7 A. Yes.

8 Q. What does that do to crop production?

9 A. Well, as far as crop production, if there's  
10 ample nutrients in the soil that are not carried through  
11 leaching, then the crop doesn't suffer because of that

12 lack -- any lack of nutrients. Now if the leaching  
13 comes about and takes enough -- percolates and takes  
14 enough nutrients away from the crop, it could influence  
15 the potential production of the crop.

16 But, again, there are nutrients from the  
17 fertilizer that we apply and there are nutrients from  
18 the soil itself that are there. So you can't always  
19 relate the fertilizer amounts directly to the crop  
20 yield. So as far as fertilizer goes, it's, again, a  
21 diminishing return response to an input.

22 Q. So would it be overly simplistic then to  
23 just look at, say, the average annual precipitation over  
24 the Lower Republican Basin to draw any conclusions about  
25 crop yields?

PATTERSON REPORTING & VIDEO

30

1 A. That's not what I am trying to illustrate  
2 here. That over the long term, we're looking at the --  
3 I don't remember how many years; 35 years -- of data,  
4 and that's represented. And then the low R-squared,  
5 there's not a relationship.

6 Q. So if I did say, It rained X amount last  
7 year in the lower Republican; ergo, I must have certain  
8 crop yields, that would be taking the proposition too  
9 far; is that correct?

10 A. I think it's probably, again, as you say, an  
11 oversimplification. I would say, it is an  
12 oversimplification.

13 Q. How do you explain the high yields of KBID  
14 in 2005?

15 A. I am trying to look for where this is in my  
16 report. Can you frame that question again, please?

17 Q. Sure. How do you explain the high crop  
18 yields of KBID in 2005?

19 A. I can't really say whether they were high.

20 Q. You haven't reviewed the yield of KBID in  
21 those years?

22 A. Yes, I have. But I am talking about what's  
23 the potential yield during those years.

24 Q. But it was a record year on some of those  
25 acres. That isn't your definition of a high yield?

#### PATTERSON REPORTING & VIDEO

31

1 A. For instance, in crop performance testing  
2 that Kansas State University does in that area, the  
3 yields there were well over 200 bushels an acre. So I  
4 think we are looking at potential yields, and we are  
5 getting, routinely, over 200 bushels of corn on  
6 producers' fields.

7 Q. So if I understand you correctly, it not  
8 only has to be a record yield, but it has to be the

9 absolute maximum yield to be a high yield?

10 A. I think we are getting down to -- again, the  
11 characterization of yield in the C-D crop production  
12 function, when we calculate yield differences, the  
13 maximum yield drops out of the equation.

14 So when we are calculating yield  
15 differences, it's more important to define the water use  
16 efficiency than the yield versus ET, which Dr. Martin  
17 had those parameters in the C-D equation.

18 So I didn't characterize -- try to  
19 characterize the relationship that yield would be the  
20 maximum yield or try to put a definition to that yield  
21 that was measured by KBID.

22 Q. Let me take you to page 5 of your report,  
23 KS1154, where you provide a couple of examples of the  
24 day-to-day variability of precipitation. Do you see  
25 that? It's in the second paragraph about halfway

PATTERSON REPORTING & VIDEO

32

1 through. And you give an example from 2005 and an  
2 example from 2006. Do you see that?

3 A. Yes. It's actually 2004 -- after harvest  
4 2004 through harvest 2005. So it's not a calendar year.

5 Q. I am not sure we are on the same page. Are  
6 you on KS1154?

7 A. Yes, I am. The second paragraph, you said?

8 Q. Yeah. And I am looking toward the very end.

9 You have, "For example, in July 2005"?

10 A. Yes.

11 Q. You refer to a specific storm in 2005?

12 A. Yes. And this was shown in --

13 MR. DRAPER: What was your question?

14 MR. BLANKENAU: I am just trying to orient  
15 him to the sentence. We seem to have had a disconnect  
16 there.

17 MR. DRAPER: Did you find that sentence?

18 A. Let's go back here. "For example" is where  
19 that sentence starts?

20 Q. (BY MR. BLANKENAU) Yeah. And I have a  
21 couple questions for you on your example.

22 A. Okay.

23 Q. Can you tell me what the percolation rate of  
24 the soils in KBID was at that time?

25 A. Specifically for that storm?

#### PATTERSON REPORTING & VIDEO

33

1 Q. Yes.

2 A. No.

3 Q. Do you know what the rainfall rate was for  
4 that particular storm?

5 A. The intensity?

6 Q. Yes.

7 A. Only on a daily basis. So if you look at --  
8 storm event 1 that I referred to is October 2004 through  
9 September 2005. It would be -- I can only characterize  
10 it as two and a half inches in that 24-hour period.

11 Q. So you don't know the actual intensity of  
12 that rainfall?

13 A. The intensity, of course. There would be  
14 a -- usually the intensity starts low and it goes high,  
15 depending on the storm characteristics. Or you might  
16 have a thunderstorm that gives you high intensity and it  
17 tails off. And I can't characterize that.

18 Q. Do you know what the soil water balance was  
19 prior to that rainfall event?

20 A. No, I don't. Again, you would have to  
21 define it. If you are trying to pin it down to a  
22 specific field, I would look at more that we had a  
23 rainfall event recorded. But across the surrounding  
24 fields of that event, there would be quite a bit of  
25 variability, from my perspective, in the soil water at

#### PATTERSON REPORTING & VIDEO

34

1 that particular time.

2 So I can't characterize it for a specific  
3 location because there's so much variability, as I have

4 been trying to point out. So there would be all -- a  
5 whole range of soil water content if you look across  
6 different fields.

7 Q. Is an infiltration rate of .104 inches per  
8 hour very high for that KBID region?

9 A. Again, I would have to go back to the soils  
10 characteristics themselves. I can't -- picking out a  
11 number there, I really can't react to that based on what  
12 you told me.

13 Q. And you didn't go through and check any of  
14 that -- any of those factors relative to your two  
15 examples?

16 A. Relative to those specific events?

17 Q. Yes.

18 A. No. But it really would be impossible to do  
19 that. Let's back up. What parameters are you talking  
20 about?

21 Q. Those that you just -- that we just  
22 discussed -- what the percolation rate was of the soil,  
23 what the soil water balance was, what the rainfall rate  
24 was or rainfall intensity -- all of that information  
25 relative to the two examples that you provided.

PATTERSON REPORTING & VIDEO

35

1 A. I did not investigate that.

2 Q. Throughout your report you have referenced

3 the work of Dr. Derrel Martin. You have a high regard  
4 for his work?

5 A. Yes, I do.

6 Q. If Dr. Martin were to be critical of how you  
7 applied your work in this report, would you agree that  
8 your report would be deficient?

9 A. I would have to know a lot more about what  
10 his position was.

11 Q. Let's go to Section 7 of your report. You  
12 have Tables 2 and 3. Can you explain those two tables  
13 to me?

14 A. These are annual -- the reported yields by  
15 NASS who reported for those cropping years. And the  
16 Irrigated is irrigated bushels per acre for the -- let  
17 me back up just a little bit.

18 The first two rows are reported by the NASS  
19 data for those two years.

20 Q. Okay.

21 A. The CROPSIM row, those are the parameters  
22 that went into the -- if you were calculating the yield  
23 directly. I've reported on those in my expert  
24 testimony, and these came from the simulations that  
25 Dr. Martin conducted.

PATTERSON REPORTING & VIDEO

1           So we are looking at then the nonirrigated  
2 yields in the same respect. The first two rows were  
3 reported by the NASS and the third row came from the  
4 crop simulations that Dr. Martin produced. The  
5 calculation that I made was the difference column by  
6 subtracting the nonirrigated from the irrigated.

7       Q. And it looks like you have got the 2005 and  
8 2006 but only a single crop simulation?

9       A. That's correct.

10      Q. So it would be the same for both of those  
11 two years then?

12      A. We would use the Cobb-Douglas equation -- or  
13 crop production function the same for two years. That's  
14 how we did it. But I was trying to point out here the  
15 fact that especially -- well, the prime point on here is  
16 that the dry land or nonirrigated yields were consistent  
17 with CROPSIM in 2005 as reported by NASS. And in 2006  
18 they were lower.

19           But there was a correlation or a similarity  
20 between the differences -- irrigated and nonirrigated  
21 crop yields in 2005 and CROPSIM results.

22      Q. And this is with respect to north central  
23 Kansas, correct?

24      A. That's correct.

25      Q. And what area of Kansas does that typically

1 encompass?

2 A. I can't give you the counties specifically,  
3 but the state's divided into three parts east to west  
4 and then two parts north to south. So there are  
5 essentially six geographic areas that are blocked east  
6 and west and north and south.

7 Q. So it's not specific to KBID then, these  
8 tables?

9 A. Correct. It's more generalized than KBID.

10 Q. For 2006 did you review the CROPSIM output  
11 to determine the causes of reduced dryland yields?

12 A. Again, the CROPSIM was actually created over  
13 this 30-year period, so all of the different  
14 variabilities in what we have been talking about as far  
15 as precipitation and the other processes were not  
16 specific to each year. It was two years as Dr. Martin  
17 executed CROPSIM.

18 Q. Can you tell me what the input values were  
19 for your 2005 crop simulation?

20 A. Again, that was not -- the CROPSIM was not  
21 executed for a particular year, 2005. It's a cumulation  
22 of years.

23 Q. What group of years would it have  
24 encompassed, if you know?

25 A. I don't know specifically.

PATTERSON REPORTING & VIDEO

38

1 Q. What particular values would it include,  
2 though, for any given group of years?

3 A. Parameters?

4 Q. Parameters.

5 A. In CROPSIM?

6 Q. Yes.

7 A. It would be easiest to look at Dr. Martin's  
8 report and look at all the processes that he reported on  
9 or gave examples of in his report. So I would point to  
10 that report.

11 Q. When you ran CROPSIM for these tables -- and  
12 you personally ran CROPSIM?

13 A. No, I did not run this with CROPSIM. Again,  
14 the results from those models -- that modeling was the  
15 execution of CROPSIM that Dr. Martin conducted.

16 Q. So you didn't do any independent analysis  
17 using CROPSIM for this report?

18 A. The only independent analysis I did was  
19 comparing my five years of data at Garden City with the  
20 parameters that Dr. Martin developed in CROPSIM for our  
21 location of Garden City.

22 Q. Do you recall what volume of water CROPSIM  
23 determined was lacking?

24 A. Lacking when?

25 Q. For 2005.

PATTERSON REPORTING & VIDEO

39

1 A. Again, it did not -- it was not executed

2 that way.

3 Q. Within that group of years?

4 A. 2005 to 2006?

5 Q. Yeah.

6 A. I don't know. I don't know the answer to

7 that question.

8 Q. So using this tool, you wouldn't be able to

9 tell us what volume of water would have been necessary

10 to achieve the optimal production?

11 A. I couldn't tell you personally.

12 Q. You validated Dr. Martin's work for Garden

13 City. Did you do that for the KBID area?

14 A. I didn't have the input data to do that.

15 Because, again, in my field side, I could put on six

16 different amounts of irrigation and get the yield

17 response, so I can describe that crop production

18 function based on those -- 2005 to 2009.

19 So that's the fundamental reason why I

20 wanted to develop a crop production function for other

21 locations, so that we could extend what we know from

22 field research to other locations.

23 Q. Doctor, do you recall when you completed

24 your rebuttal report, what day?

25 A. The date on here shows June 5, 2012.

PATTERSON REPORTING & VIDEO

40

1 Q. And that would have been the day that you  
2 completed it?

3 A. No. I can't recall if that was the date it  
4 was submitted or whether -- the exact date.

5 Q. Would it have been modified in any way after  
6 you submitted it?

7 A. After I submitted it on June 5?

8 Q. Yes.

9 A. No.

10 Q. And to whom did you submit your report?

11 A. John Draper.

12 (Deposition Exhibit 3 was marked.)

13 Q. (BY MR. BLANKENAU) Doctor, I am going to  
14 show you what will be marked as Exhibit 3. Does that  
15 look familiar to you?

16 A. No. I can't read the table here.

17 Q. Would that be the precip near KBID from  
18 Courtland data?

19 A. I don't know.

20 Q. Can you tell me who Sam Perkins is?

21 A. He is with the Kansas Department of

22 Agriculture.

23 Q. Did he work on this -- on your rebuttal

24 report at all?

25 A. No. He supplied the data. He supplied the

PATTERSON REPORTING & VIDEO

41

1 data.

2 Q. Did you work with Chris Grunewald at all?

3 A. No.

4 Q. Do you have any reason to believe that he

5 may have modified your report in any way?

6 A. Well, again, there was a -- I had to -- no,

7 I don't have any reason to believe he did.

8 Q. But you submitted your report to Mr. Draper

9 and you believe that was the end of it then?

10 A. Pardon me?

11 Q. You submitted your report to Mr. Draper and

12 you believed that was the end of it?

13 A. Yes.

14 MR. BLANKENAU: I think we are done, but why

15 don't you give us just a couple of quick minutes, if

16 that's all right.

17 (Break was taken from 9:45 to 9:49.)

18 MR. BLANKENAU: That concludes the

19 deposition. Thank you, Dr. Klocke.

20 MR. DRAPER: No questions from us.

21 (WHEREUPON, the deposition concluded at 9:49 a.m.)

22
